? Hi, all, I was wondering if anyone can point me in the right direction. I bought an old laptop (MX3600) and wanted to put some of its hard drive contents on an external drive. It would have to be either a Seagate or Western Digital 1TB external drive. The laptop came with Windows XP and other old stuff. I know there are tutorials to make a disk with the stuff inside the laptop drive. But does anyone have any idea on how to unpack the stuff and make an ISO so I can install a whole new operating system on the external drive? I am not asking for someone to do it for me. I just need to know what steps to do. I have googled for the last few hours and tried my best to find tutorials. I just can not seem to find any! Thank you for any help! I am not asking to download anything off the net. If I knew how to do that, I would. Thanks in advance! The XP OS doesn't work at all with that particular laptop. I was hoping to get it to run, however, so I have been searching for ways to get the stuff on there, so I can get at least the important stuff on there. I was hoping to get it to run, however, so I have been searching for ways to get the stuff on there, so I can get at least the important stuff on there. What stuff? You mean the programs or what? I think you're 82157476af
